

ANTHONY EDBERT FERIYANTO

anthonyef09@gmail.com | +6281287648923 | [LinkedIn](#) | [Portfolio](#)

Self-driven and detail-oriented computer science student and full-time software engineer with hands-on experience in LLM systems, machine learning, and large-scale software development. Currently building multi-tenant AI infrastructure in production, including a per-tenant ontology engine, a multi-provider LLM agent runtime, and multi-modal computer vision systems, alongside a track record in data science competitions and teaching. Proficient in Python, TypeScript, Java, and SQL, with a solid foundation in data mining and software engineering principles. Eager to contribute to impactful projects in Software Engineering, AI/LLM Engineering, Data Science, and Business Intelligence through data-driven insights and rigorous engineering practices.

KEY SKILLS

Technical	: Machine Learning, Deep Learning, Data Mining, Software Engineering, LLM Engineering, Computer Vision, Accounting, Project Management
Programming	: Python, Java, Javascript, Typescript, Dart, SQL, Golang, C++
Frameworks	: TensorFlow, PyTorch, Django, Node.js, Next.js, React, React Native, Effect-TS, SpringBoot, Flutter, Bootstrap 5, Nest.js, Streamlit
Data & Infra	: PostgreSQL, ClickHouse, GCP (Cloud Run, Pub/Sub, Cloud Tasks), Terraform, MCP, Langfuse
Soft Skills	: Effective Time Management, Leadership and Teamwork, Strong Analytical Skills
Languages	: Indonesian (Native speaker), English (EPT: 640/677, Proficient speaker)

FORMAL EDUCATION

Bachelor of Computer Science, cGPA: 4.00/4.00

Aug 2023 – Feb 2027 (Expected)

Universitas Indonesia – Depok, Indonesia

- **Relevant Courses:** Introduction to AI & Data Science, Image Processing, Semantic Web, Data Mining, Database, Software Engineering, Spoken Language Processing

PROFESSIONAL EXPERIENCES

Software Engineer (AI / LLM Engineer)

Apr 2026 – Present

Latent Space (Halo AI) – On-site

- Engineered a multi-tenant slotted-column EAV ontology engine (PostgreSQL append-only value log with per-record JSONB snapshots, mirrored to ClickHouse via CDC) allowing any tenant to model arbitrary entities and fields with zero per-tenant DDL; extended the formula kernel with date arithmetic, built an ordered rollup-recompute runner, and added slot-level indexes for hot filter fields.
- Built and hardened a multi-provider LLM agent runtime (Anthropic API, OpenAI Responses, and self-hosted open-weight models) serving WhatsApp, Instagram, and marketplace channels; diagnosed a tool name colliding with a reserved provider built-in that silently disabled two failover legs, stopped cross-provider tool-call handle leakage, and made model failover attributable in telemetry.
- Led a multi-modal vehicle appraisal system for a lender across 5 vehicle classes, combining damage perception priced against an anchored OEM price book, engine-sound fault classification, and VIN, licence plate, and registration document OCR; designed the anti-hallucination layer that blocked reasoned-not-seen damage and caught a licence plate scored at 0.95 confidence from frames the model was never sent.
- Reduced inference cost by migrating brand-monitoring, CRM classification, and vision workloads onto a self-hosted GPU fleet (Qwen, pinned with no commercial fallback), replacing a per-item paid scraping vendor with a self-hosted browser fleet, and applying model tiering with nano-tier models for deterministic extraction and frontier models only for reasoning.
- Defined the platform-wide model-visible tool contract and built MCP tool servers exposing monitoring, engagement, commerce, and HR capabilities to agents, with fail-closed caller resolution and granular tool-group entitlement so an agent only sees the actions its tenant is entitled to call.

Data Scientist (Internship)

Mar 2026 – Present

PT. Gojek Tokopedia (GoTo) – Remote

- Developed and evaluated a driver assistant AI system, ensuring model compliance with operational rules and ethical principles, including identifying potential policy violations and biases in model outputs.
- Built an OCR-based post-processing pipeline for PDF document extraction, experimenting with image preprocessing strategies to improve text quality on high-complexity and low-resource language corpora (including Batak script).
- Performed error analysis on internal embedding models powering Karto (maps) and Mart, examining retrieval and matching failures to identify systematic weakness patterns and inform model iteration.
- Applied AI governance practices by managing and analyzing unstructured data, supporting debugging efforts, and improving system reliability for production-grade AI pipelines.

AI Engineer (Internship)

Oct 2025 – Present

GDP Labs – Remote

- Developed and integrated an LLM evaluation system, including a Composite Experiment Tracker combining Langfuse for detailed logging and Google Sheets for performance aggregation, enabling structured monitoring and analysis of model outputs.
- Led benchmark migration and standardization by adopting SDK-based evaluation frameworks, eliminating redundant custom pipelines and improving system maintainability, consistency, and scalability.
- Optimized evaluation pipelines through code refactoring, benchmark compatibility analysis, unit testing, and adaptive evaluator improvements to enhance reliability and observability in AI model development.

Lead of Data Science & AI SIG

Jan 2025 – Present

RISTEK Fasilkom UI – South Jakarta, Indonesia

- Served as a problem setter for Datathon 2025 events, designing real-world inspired challenges and datasets.
- Skilled in Machine Learning (ML), Deep Learning (DL), Natural Language Processing (NLP), and Reinforcement Learning.
- Best Member of Data Science & AI SIG.
- Developed a predictive model to estimate Estimated Time of Arrival (ETA) for the main transportation system within the University of Indonesia campus, utilizing historical data and predictive algorithms.

Full Stack Developer (Internship)

Jun 2025 – Oct 2025

PT Fungsitama Cipta Teknologi – Remote

- To accelerate the development process and maintain a clean, scalable architecture, we use a fullstack boilerplate that integrates Next.js (for the frontend and server-side rendering) with Node.js (as the backend API layer). This boilerplate provides a solid foundation for building modular ERP (Enterprise Resource Planning) systems.

Teaching Assistant of Data Structure & Algorithm, Statistic & Probability, Calculus 1, Database, Data Science & AI

Jan 2024 – Present

University of Indonesia – South Jakarta, Indonesia

- Designed programming assignments as a problem setter covering key topics such as data structures, dynamic programming, trees, linked lists, and hashing.
- Designed and delivered lab sessions on probability theory, covering topics such as Naive Bayes, probability distributions, and expected value.
- Guided students in implementing statistical concepts using Python libraries such as NumPy, SciPy, and Matplotlib.

Data Scientist (Internship)

Jan 2025 – Mar 2025

Bukit Vista – Remote

- Utilized Slack as a primary communication and collaboration tool with cross-functional teams.
- Developed a predictive pricing model to optimize property rental rates based on factors such as location, seasonality, and historical booking data.
- Conducted data preprocessing, feature engineering, and model evaluation to ensure accurate and robust predictions.

Data Scientist Member

Jan 2023 – Present

Google Developer Universitas Indonesia Student Club – South Jakarta, Indonesia

- Grow my knowledge in a peer-to-peer learning environment and build solutions for local businesses and their community.

Mobile Developer (Internship)

Jun 2023 – Aug 2023

PT Indonesia Satu Tujuh – South Jakarta, Indonesia

- Developed a responsive web application using Flutter, applying the BLoC (Business Logic Component) pattern to effectively separate presentation and business logic, ensuring maintainability and scalability.
- Collaborated with team members to implement agile methodologies, enhancing project delivery timelines and team productivity.
- Developed mini apps and demo applications for features such as MVI call integration and conducted testing and contributed to the development of the “Ayo Lari” fitness application.
- Built a mobile application that connected to a web-based game platform called Judgeme, enabling seamless user interaction across platforms.

Software Engineer (Internship)

Sep 2023 – Nov 2023

BEM, Faculty of Computer Science, University of Indonesia – South Jakarta, Indonesia

- Collaborated seamlessly with the creative team to strategize, develop, and launch engaging web pages across the organization's website.

Staff of Data Science Academy

Feb 2024 – Dec 2024

COMPFEST 16 – South Jakarta, Indonesia

- Reached out to potential mentors from various companies to participate in events and programs, strengthening industry-academic collaboration.

Human Resources & Event's Expert Staff

Aug 2023 – Nov 2023

Open House FASILKOM UI – South Jakarta, Indonesia

- Guided and managed a dynamic team of 11 in the Event Division, steering the ship for the successful execution of Open House Fasilkom UI.

Staff of Business Competition

Aug 2023 – Nov 2023

UI Talks – Depok, Indonesia

- Spearheaded the meticulous coordination of over 50 candidates for the national business plan competition, demonstrating adept organizational skills and ensuring a stellar showcase of entrepreneurial talent.

AWARDS

2nd Place of ASEAN AI Hackathon 2026 (2026)

- Built Wicara, a prerequisite-first adaptive AI tutor for ASEAN learners that diagnoses the missing foundational concept behind a student's struggle before teaching, powered by a curriculum graph of 391 concepts and 521 prerequisite relationships combined with adaptive pre-tests, mastery tracking, multimodal input, AI-generated visual lessons, and a teacher-in-the-loop system.

Global Ambassador of Samsung Solve for Tomorrow Global (2025)

- Selected as a global ambassador representing Indonesia in a prestigious innovation program by Samsung, contributing to the development of AI-powered vision glasses for visually impaired runners, integrating YOLO, U-Net, and depth estimation models to enhance real-time navigation and safety.

2nd Runner Up of Google Developer Fest Jakarta (2025)

- Achieved 2nd place in a competitive developer event by developing a digital financial bookkeeping system integrated with automated credit scoring and an interactive dashboard, demonstrating strong technical implementation and real-world impact in financial technology.

Honorable Mention of GEMASTIK Data Mining (2025)

- Received national-level recognition for developing a Graph-of-Graphs-based classification model for cooperative analysis, combined with an OCR system for Javanese script, demonstrating innovation in graph-based machine learning and low-resource language processing.

CIMB Niaga Scholarship Awardee (2025)

- Selected as one of 50 awardees from over 20,000 applicants nationwide, recognizing outstanding academic performance, leadership potential, and achievements in AI-driven innovation.

1st Winner and People's Choice Award of Samsung Solve for Tomorrow (2025)

- Developed AI-powered vision glasses for visually impaired runners that integrate three models, YOLO, U-Net, and SC Depth, to assist navigation on a jogging track.

1st Winner of International Data Science FIT Competition, Universitas Kristen Satya Wacana (2025)

- Developed a weather image segmentation system using U-Net combined with traditional post-processing techniques. Implemented a CNN-based classification model enhanced with knowledge distillation for improved efficiency and accuracy.

2nd Winner of Open the Gate Hackathon, BSS Parking (2025)

- Developed a parking monitoring dashboard system integrated with a custom gate device powered by Raspberry Pi. The system uses a YOLO-based model for real-time license plate detection to automate vehicle entry and exit.

6th Winner of Datavidia Competition, Arkavidia 9.0 (2025)

- Built a Mixture-of-Experts ensemble that outperformed 300+ teams in Airbnb hotel price prediction by leveraging specialized sub-models and engineered text features.

4th Winner of Machine Learning Competition, Data Slayer 2.0 (2025)

- Triumphed over 220+ teams by developing an advanced human fall detection system that combined temporal and non-temporal approaches through a hybrid ensemble of LightGBM and ResNet.

Best Web Project Award in PBP Course & Copyright Holder of a Monolithic Django-Based Application (2024)

- Recognized as the best web project in the Perancangan dan Pemrograman Berbasis Platform (PBP) course for developing a fully functional monolithic web application using the Django framework.

4th Winner and Best Presentation of Dataquest 3.0, Airnology 3.0 (2024)

- Overcame 80+ teams by developing a predictive model using a CPU-based CatBoost framework. I was tasked with building and refining a model to classify network traffic types. The model was designed to handle large and diverse traffic datasets, identify suspicious patterns, and accurately predict traffic categories.

4th Winner of Final Round Datathon 2024, RISTEK Datathon 2024 (2024)

- Leveraged ColBERT to achieve an MRR of 0.97, enabling precise product matching by usage, brand context, and bundling to enhance e-commerce search.

3rd Winner of Machine Learning Competition, Data Slayer 1.0 (2023)

- Outperformed 120+ teams by developing a custom deep learning architecture within a multi-layer stacking ensemble to accurately estimate CO₂ vehicle emissions in Indonesia.

3rd Winner of Pekan RISTEK Data Competition 2023 (2023)

- Outperformed 30+ teams by using CatBoost with custom weighting on the "Type" feature to accurately predict Indonesian car prices.

PROJECT EXPERIENCES

BaKu Website (2025)

- Developed a secure web platform for centralized library book borrowing and online reading, eliminating the need for physical visits.

SIZOPI Website (2025)

- Designed and developed a centralized zoo management system in PostgreSQL, leveraging triggers, stored procedures, and advanced queries, to ensure efficient data handling and operational support.

Anthony's Portfolio Website (2025)

- Built a dynamic website showcasing my experiences and projects, and updated its desktop-optimized design to be fully responsive across devices.

JakEt - Jakarta Gadget Web (2024)

- Developed JakEt, a platform that helps South Jakarta residents find reliable, high-quality gadgets within their budget, providing optimal specifications for a safer, more convenient digital experience.

OCR System to Predict The Percentage of Valid Votes (2024)

- Implemented a system using Tesseract OCR to automatically count election papers, enhancing both accuracy and efficiency.

Prediction Model for Electric Vehicle Problems in Washington, United States of America (2023)

- Built a project using a Data.gov dataset to predict the number of electric vehicle users in Washington State.

Clustering Model for Flood Problems in Jakarta, Indonesia (2023)

- Used K-Means clustering to compare flood management effectiveness in DKI Jakarta between 2015–2017 and 2018–2020, marking my first foray into data science.

CERTIFICATES

Certificate in Creative Writing

Udemy – Online

May 2024

English Proficiency Test, Score: 640/677

Lembaga Bahasa Internasional LBI FIB UI – South Jakarta, Indonesia

Nov 2023

Software Engineering Fundamental Course

RevoU – Online

Apr 2023

Data Cleaning, Intro to Machine Learning, Intro to Programming, Pandas

Kaggle – Online

Aug 2024
